== Education

```
#experience-edu(  
  title: "Bachelor's Degree in Electrical Engineering",  
  subtitle: "Federal University of Paraná",  
  task-description: [  
    - Teaching assistant in Digital Electronics and Microelectronics, assisting with  
exercises, doubts, and laboratory practices.  
    - Conducted Python course for Chemical Engineering.  
    - Administrative manager of Seatel, organizing courses, lectures, and technical  
visits.  
    - Member of PET: IoPET (IoT and firmware), BigPET (machine learning, leader),  
PET3D (design and 3D printing, leader).  
    - Developed electrical subsystem for off-road vehicle (wiring harness, PCB,  
firmware, 3D modeling in Catia). Achievements: 1st place regional electrical project  
South 2019, 11th place national Baja SAE 2020, 2nd place regional electrical project  
South 2020.  
  ],  
  date-from: "03/2019",  
  date-to: "12/2024",  
)
```

```
#experience-edu(  
  title: "Master's Degree in Electrical Engineering",  
  subtitle: "Federal University of Paraná",  
  task-description: [  
    - Research in digital circuits for telecommunications, focusing on signal  
processing and hardware optimization.  
    - Study of FPGA and ASIC architectures for energy efficiency in embedded wireless  
communication systems.  
  ],  
  date-from: "03/2025",  
  date-to: "Present",  
)
```

== Professional Experience

```
#experience-work(
  title: "Software Developer / Data Scientist",
  subtitle: "IoTag Technology",
  facility-description: "Company focused on precision agriculture",
  task-description: [
    - Developed firmware in C/C++ for virtual terminal interfaces of agricultural machines.
    - Created data science algorithms for spatial data and equipment collection.
    - Implemented scalable cloud services with AWS and databases.
  ],
  date-from: "10/2022",
  date-to: "Present",
)
```

```
#experience-work(
  title: "Engineering Intern",
  subtitle: "Lactec",
  facility-description: "Institute of technology and research",
  task-description: [
    - Assisted in the development of capacitive water level and flow sensors for hydroelectric power generator.
    - Enhanced skills in electronics, microcontroller programming, and systems integration.
  ],
  date-from: "06/2022",
  date-to: "10/2022",
)
```

== Complementary Activities

```
#experience-work(
  title: "Member of Electrical Subsystem and Management",
  subtitle: "UFPR Baja SAE",
  facility-description: "Extension project for off-road vehicle",
  task-description: [
    - Developed wiring harness, PCBs, and firmware.
    - 3D modeling in Catia.
    - Achievements: 1st place regional electrical project South 2019, 11th place national 2020, 2nd place regional South 2020.
  ],
  date-from: "01/2019",
  date-to: "12/2021",
)
```

```
#experience-work(
  title: "Scientific Researcher",
  subtitle: "GICS",
  facility-description: "Research group in circuits and systems",
  task-description: [
    - Developed TRNG in VHDL, implemented in FPGA and designed with Cadence.
    - Modeled DPD based on Memory Polynomial in Python, implemented in VHDL and validated with Xilinx.
  ],
  date-from: "08/2021",
  date-to: "12/2024",
)
```

```
#experience-work(
  title: "Project Manager and Member",
  subtitle: "Tutorial Education Program (PET)",
  facility-description: "Undergraduate enhancement program",
  task-description: [
    - IoPET: Developed electronic lock with ESP01 and MQTT.
    - BigPET: Led machine learning projects, taught course and developed fake news detector.
    - PET3D: Led design and 3D printing, including supports for face shield masks during the pandemic.
    - Teaching assistant in Digital Electronics and Microelectronics.
  ],
  date-from: "08/2021",
  date-to: "12/2024",
)
```

```
#colbreak()
```

== Projects

```
#project(
  title: "Virtual Assistant",
  description: [
    - Multimodal assistant with LangChain for NLP, FastAPI for backend and speech recognition. Frontend in JavaScript.
  ],
  date-from: ""
)
```

```
#project(
  title: "Electronic Lock",
  description: [
    - Smart lock with ESP-01 (ESP8266) and MQTT protocol for remote control.
  ],
  date-from: ""
)
```

```
#project(
  title: "TRNG Integrated Circuit",
  description: [
    - TRNG in 130 nm with VHDL, optimized in FPGA, synthesized with Genus and routed with Innovus (43 cells, 41  $\mu$ W).
  ],
  date-from: ""
)
```

```
#project(
  title: "Fake News Detector",
  description: [
    - System for verifying the truthfulness of news with text processing and machine learning (Logistic Regression, KNN, Random Forest).
  ],
  date-from: ""
)
```

```
#project(  
  title: "Automatic Resume Translator",  
  description: [  
    - Automated resume translation system using CrewAI and Typst, hosted on GitHub  
(Je-Leo-AS/Curriculo), with versions in Portuguese (PT-BR) and English (EN) in  
separate branches. Implemented GitHub Actions to trigger automated translations via  
CrewAI, updating the EN branch.  
  ],  
  date-from: ""  
)
```
